Bensheim, Germany, April 20, 2026 – The German software company [speedikon FM AG](#) welcomed a delegation group from Brazil to its headquarters in Bensheim as part of the “Partnering in Business with Germany” global program of the Federal Ministry for Economic Affairs and Energy.

During their visit, the participants explored the solutions and technologies of the speedikon FM group of companies and took part in an open exchange on current developments in the fields of Facility Management, Corporate Real Estate Management, Data Center Management, photorealistic digital twins, artificial intelligence, and energy data management.

CEO Adrian Merkel introduced the group of companies and its broad solution portfolio, with a focus on the [photorealistic digital twin platform FRAMENCE](#), developed by Framence, part of the speedikon FM group of companies.

The session sparked particular interest around the idea of creating a true-to-reality digital representation of industrial environments, as well as the different ways the concept of the digital twin is understood in practice.

The exchange was open and interactive, with many questions from the participants leading to a lively discussion. Topics included digital transformation, current developments in artificial intelligence, and the innovative AI solutions developed by [Innomatik AG](#). In particular, the use of smaller, locally deployable AI models drew a lot of interest from the group.

There was also strong interest in existing projects of the speedikon FM group of companies in Brazil, such as a joint energy management research project with ULBRA University. In addition, the group exchanged views on the balance between standardized software solutions and the need for flexible, project-specific configurations.

Energy management and monitoring were another focus, particularly how industrial clients benchmark the performance of their facilities in operation using the [WiriTec C](#), developed by [WiriTec GmbH](#).

speedikon FM AG would like to thank the delegation group from Brazil for the open and valuable exchange, as well as the Federal Ministry for Economic Affairs and Energy and GIZ for their role in the “Partnering in Business with Germany” program.

About speedikon FM

speedikon FM is a pioneering German software company that specializes in the digitalization of technical and commercial processes within buildings, data centers, and industrial plants. Since 1997, our company has been providing not just products, solutions, and technologies, but also a comprehensive range of services that empower our customers to optimize their asset-related business operations. Our team at speedikon FM possesses extensive expertise in handling vast amounts of data, complex databases, and seamless integration with existing software and hardware solutions.
