

## speedikon FM AG Partners with PT. Andalan Teknologi Mandiri to Strengthen Integrated Data Center and Building Solutions

*speedikon FM AG is pleased to announce a new strategic partnership with PT. Andalan Teknologi Mandiri (PT.ATM), an established Indonesian provider of data center infrastructure, construction projects, and IT and engineering services. The collaboration aims to further expand innovative solutions for digital data center management and visual building documentation on an international scale.*

**Bensheim, Germany, May 8, 2026** – At the heart of the partnership are the DAMS C (Data Center Asset Management System) solution developed by speedikon FM AG and the photorealistic digital twins by Framence, a partner company of speedikon FM AG. Together, these technologies enable the seamless digital representation of complex infrastructures throughout every stage of their lifecycle, from planning and operations to maintenance.

PT. ATM contributes extensive expertise in data center construction, maintenance, consulting, and mechanical and electrical systems. Through the successful delivery of demanding projects and a strong focus on customer satisfaction, the company has established itself as a trusted partner, particularly for large enterprises.

“With PT. ATM, we have gained a partner that not only brings deep technical expertise in the data center sector, but also shares our vision for integrated digital solutions,” says Adrian Merkel, Managing Director of speedikon FM AG. “Together, we are creating the foundation for greater transparency, efficiency, and security in the operation of critical infrastructure.”

By combining DAMS C with Framence’s digital twins, physical assets can now be captured in a fully visual and data-driven way for the first time. This not only simplifies asset management and maintenance, but also reduces potential sources of error and significantly accelerates all related processes.

“Today’s customers expect holistic solutions that connect construction, operations, and digitalization,” explains Taufik Meirman, Managing Director of PT. ATM. “Our partnership with speedikon FM AG and Framence enables us to meet exactly these expectations with an integrated approach that goes far beyond traditional systems.”

The collaboration is particularly significant in light of the growing demands placed on data centers. Increasing complexity, energy efficiency requirements, operational reliability, and the shortage of skilled professionals are all driving the need for new digital approaches. Through this partnership, companies will be able not only to manage their infrastructure more efficiently, but also to position themselves for the future with long term resilience and scalability.

## **About speedikon FM**

speedikon FM is a pioneering German software company that specializes in the digitalization of technical and commercial processes within buildings, data centers, and industrial plants. Since 1997, our company has been providing not just products, solutions, and technologies, but also a comprehensive range of services that empower our customers to optimize their asset-related business operations. Our team at speedikon FM possesses extensive expertise in handling vast amounts of data, complex databases, and seamless integration with existing software and hardware solutions.
