

speedikon FM AG welcomes delegation group from Mexico in Bensheim

German software solutions developer welcomes representatives of 15 Mexican companies to its headquarters in Bensheim as part of the “Partnering in Business with Germany” program. The visit provided insights into the solutions and technologies of the speedikon FM Group and offered an opportunity for international knowledge exchange and discussion.

Bensheim, Germany, September 17, 2026 – The German software company speedikon FM AG welcomed a delegation group from Mexico to its headquarters in Bensheim as part of the “Partnering in Business with Germany” global program of the Federal Ministry for Economic Affairs and Energy.

The participants represented companies from a range of sectors, including industrial automation, engineering, manufacturing and construction, and were given comprehensive insights into the diverse software solutions of the speedikon group of companies.

Adrian Merkel, CEO of speedikon FM AG, introduced the group, its areas of expertise and its international activities. The presentation covered Facility Management and Corporate Real Estate Management, energy and resource management, Data Center Management, photorealistic digital twins and current research in artificial intelligence.

A key theme throughout the presentation was the connection between these different areas. BIM models and large geometries can be combined with technical and operational information, while energy and sensor data provide additional insight into the performance of buildings and assets. This integrated approach also provided the context for discussing how emerging technologies can further support the use and analysis of increasingly complex information.

Against this background, the conversation turned to the growing role of artificial intelligence in industrial applications. The group's research and development activities include AI, machine learning, robotics, virtual reality and augmented reality.

The visit also highlighted the international reach of the speedikon FM group's solutions. The group works with customers around the world, both through direct collaboration with global organizations and through a network of more than 50 international partner companies. This combination of technologies developed in Germany and local market expertise enables customers to receive support that reflects the requirements of their respective markets.

The Mexican business representatives also had the opportunity to ask questions and share perspectives from their own markets and industries. The conversations offered both sides new perspectives and underlined the value of international dialogue on current challenges in digitalization.

speedikon FM AG would like to thank the Mexican delegation for the valuable discussions, as well as the Federal Ministry for Economic Affairs and Energy and the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ) GmbH for their role in the "Partnering in Business with Germany" program.

About speedikon FM

speedikon FM is a pioneering German software company that specializes in the digitalization of technical and commercial processes within buildings, data centers, and industrial plants. Since 1997, our company has been providing not just products, solutions, and technologies, but also a comprehensive range of services that empower our customers to optimize their asset-related business operations. Our team at speedikon FM possesses extensive expertise in handling vast amounts of data, complex databases, and seamless integration with existing software and hardware solutions.
